Real-time analytics with NetApp Cloud Insights

You can quickly ascertain the health of your cloud services on NetApp HCI with NetApp Cloud Insights.

THIS DOCUMENTATION IS PROVIDED AS A TECHNOLOGY PREVIEW.

NetApp Cloud Insights monitors compute, network, storage stack and application statuses for multi-vendor, heterogenous services and now provides analytics on many cloud services, including on NetApp HCI.

You can see information like this:

- Number of Kubernetes clusters
- Number of pods
- Network throughput
- Cluster latency
- CPU utilization on virtual machines
- IOPs
- and much more

The Cloud Insights Dashboard

This NetApp Cloud Insights Dashboard shows analytics for NetApp Kubernetes Service clusters and pods.

A unique NetApp HCI Data Collector

Each vendor for which Cloud Insights provides analytics has its own Data Collector running on a central Acquisition Unit that connects with and collects stack metrics. Similarly, Cloud Insights employs a unique Data Collector for NetApp HCI. Getting a new Data Collector deployed is easy with a task of less than a minute.

Enter just the Data Collector-specific information in a web form and then the Data Collector is up and running.
