Monitor volumes on your storage cluster..... 1

Monitor volumes on your storage cluster

The SolidFire system provisions storage using volumes. Volumes are block devices accessed over the network by iSCSI or Fibre Channel clients. You can monitor details about access groups, accounts, initiators, used capacity, Snapshot data protection status, number of iSCSI sessions, and the Quality of Service (QoS) policy associated with the volume.

You can also see details on active and deleted volumes.

With this view, you might first want to monitor the Used capacity column.

You can access this information only if you have NetApp Hybrid Cloud Control administrative privileges.

Steps

1. Open a web browser and browse to the IP address of the management node. For example:

```
https://[management node IP address]
```

2. Log in to NetApp Hybrid Cloud Control by providing the NetApp HCI storage cluster administrator credentials.
3. In the left navigation blue box, select the NetApp HCI installation.

The Hybrid Cloud Control Dashboard appears.

4. In the left navigation, select the cluster and select **Storage > Volumes**.

VOLUMES

Overview

Active Deleted

5. On the Volumes page, use the following options:

- Filter the results by clicking the **Filter** icon.
 - Hide or show columns by clicking the **Hide/Show** icon.
 - Refresh data by clicking the **Refresh** icon.
 - Download a CSV file by clicking on the **Download** icon.
6. Monitor the Used capacity column. If Warning, Error, or Critical thresholds are reached, the color represents the used capacity status:
- Warning - Yellow
 - Error - Orange
 - Critical - Red
7. From the Volumes view, click the tabs to see additional details about the volumes:
- Access Groups:** You can see the volume access groups that are mapped from initiators to a collection of volumes for secured access.

See information about [volume access groups](#).
 - Accounts:** You can see the user accounts, which enable clients to connect to volumes on a node.

When you create a volume, it is assigned to a specific user account.

See information about [NetApp HCI user accounts](#).

- c. **Initiators:** You can see the iSCSI initiator IQN or Fibre Channel WWPNS for the volume. Each IQN added to an access group can access each volume in the group without requiring CHAP authentication. Each WWPNS added to an access group enables Fibre Channel network access to the volumes in the access group.

See information about [access groups, initiators, and CHAP authentication methods](#) in the *NetApp Element User Guide*.

- d. **QoS Policies:** You can see the QoS policy applied to the volume. A QoS policy applies standardized settings for minimum IOPS, maximum IOPS, and burst IOPS to multiple volumes.

See information about [performance and QoS policies](#).

See information about [Quality of Service policies](#) in the *NetApp Element User Guide*.
