Cloud services deployment overview 1

Cloud services deployment overview

NetApp HCI installations connect to, register with, and become a deployable region with NetApp Cloud Central. With this, you can centrally manage cloud services for NetApp HCI on-premise systems in the same way that you do in public clouds.

Deploying and configuring a NetApp HCI solution in the cloud involves these steps. Our user interfaces help you every step of the way:

- Deploy and configure NetApp HCI by using the quick and easy NetApp Deployment Engine that you've used previously. See the [NetApp HCI Deployment Guide in the NetApp HCI Documentation Center](#).
- [Enable cloud services](#) by using the management node along with a NetApp Hybrid Cloud Control wizard. You establish a connection to NetApp Cloud Central and authenticate and register your NetApp HCI installation to your Cloud Central account.
- [Create a Kubernetes cluster](#) by using the NetApp Kubernetes Service, one of many services located on NetApp Cloud Central.
- [Create a Kubernetes project](#).
- [Add applications to your Kubernetes cluster](#).
